01 / SUMMARY

Senior Frontend Engineer with **8+ years** shipping React & TypeScript at production scale to **Mercedes-Benz, Sonova, Thalia, and TBO Clothing** — multi-tenant architecture, design systems, Core Web Vitals under 2 seconds. I reach into **NestJS and LLM orchestration** when the product needs it; the work that ships is mostly the frontend.

02 / EXPERIENCE

Senior Frontend Engineer — *Full-Stack & AI Orchestration*

2022 – Present

Decommerce · Remote, Europe

- Lead the frontend of a white-label, multi-tenant B2B SaaS community platform shipped to enterprise clients across Europe — **Mercedes-Benz, Sonova, Thalia, TBO Clothing**. Built the multi-tenant design system that drives every tenant surface from one set of brand tokens — zero duplicated code per tenant, **per-client setup time down 60%**.
- Delivered four production Next.js apps (SSR + PWA) with **sub-2s cold load on 4G** and Lighthouse **92+** across Performance, Accessibility, Best Practices. Cache keyed at `tenant:campaign` so editors see their changes instantly while every other surface keeps rendering from cache.
- Shipped a **35+ component Storybook library** with strict design tokens, lifting cross-team UI velocity by **38% per sprint** and cutting design-to-code handoff from days to hours.
- Architected **Klaire**, an AI onboarding agent (NestJS · Next.js · Langbase · GPT-4o · Puppeteer) that collapsed enterprise campaign setup from **one week to under 20 minutes**, with zero developer hours per new client.
- Built a B2B outbound automation pipeline in n8n (Apollo · Claude · PhantomBuster · GPT-4o · Vapi) running **6,316 executions / week** on self-hosted GCP — driving production incidents from **9/quarter to zero**.

Senior React / Next.js Engineer — *Performance & Architecture*

2021 – 2022

ComOn Enterprise LLC · Remote

- Overhauled a React codebase scoring **under 50 on Lighthouse** — performance optimization, code-splitting, and rendering fixes pushed scores to **92+**, transforming a sluggish product into a fast, accessible app.
- Led the architecture migration to a headless ecommerce stack with Gatsby — SSG + SSR delivering sub-second page loads across the storefront.
- Established a shared Storybook component library that eliminated duplicate UI code across 3 teams and cut design-to-code handoff from days to hours.

Frontend Engineer & Team Lead — *React Native & AR*

2018 – 2020

Smart Reality · Lahore, Pakistan

- Led **5 engineers** to ship a React Native + Unity 3D AR education app in 11 months — **1,000+ downloads**, 4.2★ rating, <80ms AR frame latency on mid-range Android.

Frontend Developer

2016 – 2018

AcroEx · Lahore, Pakistan

- Shipped **11 ThemeForest templates** generating **10,000+ cumulative sales** (top 5% of sellers) — clean markup, pixel-accurate, genuinely responsive. Built responsive UIs for 8+ client projects, cutting QA bugs by **30%**.

03 / WHERE I'M STRONGEST

- **Performance.** Core Web Vitals under 2s, by design — not as an afterthought.
- **State.** RTK Query, Zustand, server cache as a first-class citizen.
- **API.** Strict contracts, tRPC / GraphQL / REST, Zod everywhere data crosses a boundary.
- **Scale.** Multi-tenant design systems & Storybook-driven dev across multiple teams.
- **AI in product.** LLMs streaming into real interfaces, with the validation layer to make output trustworthy.

04 / STACK

LANGUAGES	TypeScript · JavaScript (ES6+) · HTML · CSS · SQL
FRONTEND	React · Next.js · Gatsby · React Native · SSR · PWA · Storybook · Tailwind · Design tokens
BACKEND & INFRA	Node.js · NestJS · PostgreSQL · Redis · BullMQ · GCP · REST
AI & AUTOMATION	Claude · GPT-4o · Langbase · n8n · Vapi · Puppeteer · Tool calling · Agent loops
ARCHITECTURE	Multi-tenant SaaS · White-label systems · Event-driven · Job queues

05 / EDUCATION

ACCP Pro Diploma — Aptech Computer Education, Lahore

CS curriculum equivalent to BSCS
